Portfolio | GitHub | Naukri | LeetCode

Summary

Full Stack Developer with 2 years delivering enterprise-grade MERN applications — specializing in secure authentication systems, REST API optimization, and data-driven analytics platforms. Strong DSA foundation — 1,200+ LeetCode problems including 170+ Hard. Immediate joiner.

Work Experience

MERN Stack Developer

May 2024 – April 2026

RR IT Solutions

- Developed responsive, accessible UI components in React.js with dynamic role-based rendering, ensuring seamless user experience across department-specific dashboards and analytics views.
- Authored unit test cases for critical API endpoints and authentication flows using modular testing practices, reducing bug rate and improving code reliability across sprint releases.
- Conducted peer code reviews and enforced coding standards across the codebase, improving maintainability and reducing technical debt in a fast-paced startup environment.
- Diagnosed and resolved complex frontend and backend bugs during development and QA cycles, improving application stability and ensuring on-time sprint delivery.
- Worked in an Agile environment with 2-week sprint cycles, participating in daily standups, sprint planning, and retrospectives.

Technical Projects

Insights

May 2024 – April 2026

- Engineered end-to-end authentication system with JWT-based login and Single Sign-On (SSO). Implemented Role-Based Access Control (RBAC) enabling department-level data visibility across admin and user hierarchies.
- Designed and optimized 20+ RESTful APIs for user management and report mapping using MongoDB indexing, reducing average API response time by 35%.
- Structured department-user mapping logic with dynamic dashboard rendering based on login context. Integrated Power BI dashboards for real-time department-specific analytics and reporting.
- Implemented user activity tracking module capturing menu click counts and report usage metrics for behavioural analytics.
- Consumed Darwinbox API for employee data synchronization, enabling real-time employee search and mapping within the platform.
- Leveraged React Context API for global state management, handling user session, role-based UI rendering and department context across the entire application without prop drilling.
- Streamlined admin-side employee search enabling administrators to query, find and map employees to respective departments, simplifying user-department access management.
- **Tech Stack:** React.js, Node.js, Express.js, MongoDB, JWT, Power BI, Darwinbox API

The Enterprise Document Search & Authentication System

May 2024 – April 2026

- Architected type-ahead search with fuzzy matching for fast document retrieval, implementing debounced input on the frontend and optimized query logic on the backend for real-time suggestions.
- Boosted document retrieval speed by optimizing MongoDB query performance using indexing and efficient LAN-based internal data transfer.
- Crafted reusable frontend components for document search and authentication flows, ensuring consistent UX across the application.
- **Tech Stack:** React.js, Node.js, Express.js, MongoDB, JWT

Technical Skills

Frontend: HTML5, CSS3, JavaScript, TypeScript, React.js, Next.js, Tailwind CSS, Vite

Backend: Node.js, NestJS, Express.js, REST APIs, WebSockets, JWT, OAuth2, FastAPI

Databases: MongoDB, PostgreSQL, MySQL, Firebase

AI: LangChain, MCP, RAG, Generative AI with LLMs

Payments & Auth: Stripe, Razorpay, Auth0

Cloud & DevOps: Vercel, Render, GCP, Docker, GitHub Actions (CI/CD) - familiar with Azure and AWS environments

Methodology: Agile, Microservices, RESTful API Design

Tools: Git, GitHub, Postman, Swagger

Education

College of Engineering Guindy, Anna University

2018 – 2022

B.Tech in Information Technology

CGPA: 7.56 / 10.0

Certifications

- Generative AI with Large Language Models — DeepLearning.AI [🔗](#)
- Node.js — Scaler Academy [🔗](#)
- JavaScript — Great Learning [🔗](#)
- React JS — Udemy [🔗](#)
- Introduction to Cybersecurity — CISCO [🔗](#)
